EDUCATION

Stony Brook University

Bachelor of Science in Computer Science, CGPA: 3.56, Dean's List

Stony Brook, NY

Expected May 2027

TECHNICAL SKILLS

Languages: Python (Advanced), SQL/PostgreSQL (Advanced), R, Java, C/C++

Data Technologies: MySQL, Azure Cloud, Apache Airflow, Astro, SCADA System, Power BI, Power Automate, Tableau, Salesforce

Developer Tools: Git, Docker, tmux/screen, Jupyter Notebooks, MS Office (Excel, Word, PowerPoint)

Machine Learning & Libraries: pandas, NumPy, scikit-learn, Selenium, requests

TECHNICAL EXPERIENCE

Data Engineering Intern

May 2026 – Present

Data Management and Biomedical Data Analytics Lab

- Engineered ETL pipeline ingesting 3B+ rows of Cerner Health Facts EHR data into a star-schema MySQL database (7 tables, 250 GB) with bulk-load optimization and FK integrity validation.
- Implemented ICD-9 → ICD-10 diagnosis code mapping across 268M records via JOIN/UPDATE on a 78K-row crosswalk table, enabling standardized clinical analytics on large-scale healthcare data.

Data Engineering Intern

Oct. 2025 – May 2026

Relevant Power

- Collated and wrangled river flow and pricing historical data for 25 hydropower plants, cutting processing time by 95%.
- Spearheaded an ETL pipeline using Azure Data Factory to store 10GB+ datasets for energy model training and reporting.
- Orchestrated Azure Functions in conjunction with Power BI to deliver automated pricing reports, driving financial decisions.

Data Engineering Intern

Aug. 2025 – May 2026

Stony Brook Foundation

- Built ELT pipeline scoring 100K+ donors on donation amount, frequency and recency multi-table joins and CTEs.
- Migrated performance reports from Excel to PowerBI, delivering automated dashboards to 100+ employees across 10 teams.
- Developed Power BI aggregation dashboards to validate data integrity across ETL pipelines and business reporting systems.

Research Assistant

Dec. 2024 – Sept. 2025

Brookhaven National Laboratory

- Developed Python pipelines for XAFS data retrieval, preprocessing, and EDA, streamlining analysis across 50+ datasets.
- Applied PCA and K-means clustering to uncover structural and bond-length patterns in data, achieving 80% clustering accuracy and contributing to a research publication submission.

Teaching Assistant: Introduction to Data Science

Aug. – Dec. 2025

Stony Brook University

- Led Machine Learning sessions with 150+ Data Science (CSE 351) students under Dr. Praveen Tripathi.
- Fostered collaborative environments during office hours with 50+ students by leading successful peer-led reviews.

Database Maintenance Intern

Dec. 2024 – Sept. 2025

Stony Brook University

- Developed Python and SQL pipelines to automate data ingestion, validation, and maintenance for departmental databases.
- Built automated data quality and reconciliation workflows to ensure integrity across academic datasets.

PROJECTS

Natural Language to SQL tool | Python, PostgreSQL, and Google Gemini

June 2026

- Built an end-to-end NL-to-SQL pipeline in Python, batch ingesting 1M+ weather records across 10 US cities into PostgreSQL.
- Engineered a schema extraction service that auto-generates a JSON data catalog from PostgreSQL's information schema, reducing LLM hallucination and improving SQL generation accuracy.
- Deployed a Flask web interface exposing the pipeline as a REST API endpoint, translating NL queries into executed SQL.
